Universities as Living Labs for Sustainable Development Apr 09 2020 This book fills an important gap in the literature, and presents contributions from scientists and researchers working in the field of sustainable development who have engaged in dynamic and further development of sustainability in higher education. It is widely known that universities are key players in terms of the implementation and further development of sustainability, with some having the potential of acting as "living labs" in this rapidly growing field. There are virtually no publications that explore the living labs concept as it relates to sustainability, and in an integrated manner. The aims of this book, which is an outcome of the "4th World Symposium on Sustainable Development at Universities" (WSSD-U-2018) held in Malaysia in 2018, are as follows: i. to document the experiences of universities from all around the world in curriculum development, innovation, research, activities and practical projects as they relate to sustainable development at the university level; ii. to collect information, ideas and experiences acquired in the execution of projects, including successful initiatives and good practice; iii. to introduce and discuss methodological approaches and projects that seek to integrate the topic of sustainable development into the curricula of universities; and iv. to promote the scalability of existing and future models from universities as living labs for sustainable development. The papers are innovative, cross-cutting and many reflect practice-based experiences, some of which may be replicated elsewhere. Also, this book, prepared by the Inter-University Sustainable Development Research Programme (IUSDRP) and the Sustainable Development Research and Transfer Centre (WSD-RTC), reinforces the role played by universities as living labs for sustainable development.

Discard Studies Feb 06 2020 An argument that social, political, and economic systems maintain power by discarding certain people, places, and things. Discard studies is an emerging field that looks at waste and wasting broadly construed. Rather than focusing on waste and trash as the primary objects of study, discard studies looks at wider systems of waste and wasting to explore how materials, practices, regions, and people are valued or devalued, becoming dominant or disposable. In this book, Max Liboiron and Josh Lepawsky argue that social, political, and economic systems maintain power by discarding certain people, places, and things. They show how the theories and methods of discard studies can be applied in a variety of cases, many of which do not involve waste or pollution. Liboiron and Lepawsky consider the partiality of knowledge and offer a theory of scale, exploring the myth that municipal solid waste produced by consumers; discuss peripheries, centers, and power, using content moderation as an example of how dominant systems find ways to discard; and use theories of difference to show that universalism, stereotypes, and inclusion politics of discard and even purification—as exemplified in "inclusive" efforts to broaden the Black Lives Matter movement. Finally, they develop a theory of change by considering "wasting well," outlining techniques, methods, and propositions for a justice-oriented discard studies that keeps power in view.
