**The Assessment and Treatment of Women Offenders** Feb 25 2020 There is a large body of research that provides guidance for those working with offenders on how they should be treated once they are in the correctional system. The problem is that most, if not all this research has been conducted on all male populations and it is assumed that women offenders are the same. However, women have different needs and support systems than men in some areas of their lives and it is unclear whether all research based on men can be generalized in this way. The book provides a review of the research literature to guide evidence-based practice in the assessment and treatment of adult female

offenders. An historical overview of women's crime and imprisonment will be followed by a global review of various theories of female criminality. The remainder of the book reviews the psychology of criminal conduct, with a specific focus on three psychological principles of effective intervention: risk, need and responsivity. Respectively, these principles set the "who", "what" and "how" for correctional intervention.

**Genograms** May 22 2022 Widely used by both family therapists and all health care professionals, the genogram is a graphic way of organizing the mass of information gathered during a family assessment and finding patterns in the family system for more targeted treatment. Now updated and expanded in its third edition, and featuring revised genograms for easier reading, reflecting the growing and widespread use of genograms for clinical intervention, this best-selling text provides a standard method for constructing a genogram, doing a genogram interview, and interpreting the results. Genograms of famous families—Sigmund Freud, Woody Allen and Mia Farrow, the Kennedys, Jane Fonda and Ted Turner, Bill Clinton, Princess Diana, the Roosevelts, and Thomas Jefferson, to name a few—bring the text to life, and help to elucidate the principles of family systems theory and systemic interviewing, which form the basis of genogram work. Once these principles have been explained, the authors go on to present the important clinical applications of genograms in both family therapy and family medicine. These applications include the effective assessment of patients' risk for emotional problems such as anxiety or depression; structural patterns among families such as divorce and remarriage; relationship patterns such as enmeshment, conflicts, and cut-offs; recent and chronic life stressors such as pregnancy, acute illness, poverty, and racism; and family life cycle transitions and developmental crises, among other uses. By providing a fascinating view into the richness of family dynamics, McGoldrick and her coauthors provide an invaluable guide to clinicians for accurately charting a family's structure, making it easier to scan for potential problems and take proactive steps to utilize resources when necessary.

**Assessment and Treatment of Muscle Imbalance** Apr 21 2022 *Assessment and Treatment of Muscle Imbalance: The Janda Approach* blends postural techniques, neurology, and functional capabilities in order to alleviate chronic musculoskeletal pain and promote greater functionality. Developed by Vladimir Janda, respected neurologist and physiotherapist, the Janda approach presents a unique perspective to rehabilitation. In contrast to a more traditional structural view, the Janda approach is functional—emphasizing the importance of the sensorimotor system in controlling movement and chronic musculoskeletal pain syndromes from sports and general activities. *Assessment and Treatment of Muscle Imbalance: The Janda Approach* is the only text to offer practical, evidence-based application of Janda's theories. Filled with illustrations, photos, and step-by-step instructions, *Assessment and Treatment of Muscle Imbalance* uses a systematic approach in presenting information that can be used in tandem with other clinical techniques. This resource for practitioners features the following tools: --A rationale for rehabilitation of the musculoskeletal system based on the relationship between the central nervous system and the motor system --A systematic method for the functional examination of the muscular system --Treatment processes focusing on the triad of normalization of peripheral structures, restoration of muscle balance, and facilitation of afferent systems and sensorimotor training --The role of muscle imbalance and functional pathology of sensorimotor systems for specific pain complaints, including cervical pain syndrome, upper- and lower-extremity pain syndromes, and low back pain syndromes *Assessment and Treatment of Muscle Imbalance* provides an evidence-based explanation of muscle imbalance. The step-by-step Janda system of evaluation is explained—including analysis of posture, balance, and gait; evaluation of movement patterns; testing of muscle length; and assessment of the soft tissue. The text explores treatment options for muscle imbalance through facilitation and inhibition techniques and sensorimotor training to restore neuromuscular function. It also includes four case studies examining musculoskeletal conditions and showing how the Janda approach compares with other treatments. This text combines theory, evidence, and applications to assist clinicians in implementing the Janda approach into their practice. *Assessment and Treatment of Muscle Imbalance: The Janda Approach* focuses on the neurological aspects of muscle imbalance that are common causes of pain and dysfunction in sports and occupational activities. By distilling the scientific works of Vladimir Janda into a practical, systematic approach, this unique resource will assist health care providers in treating patients with musculoskeletal complaints as well as exercise professionals in developing appropriate exercise prescription and training programs.

**Psychological Assessment and Therapy with Older Adults** Mar 20 2022 "Due to improvements in health and healthcare, the elderly population is expanding rapidly within the developed world. However, more and more elderly people require some form of psychological support at some point in their later years. The types of problems faced by this population are quite distinct and often more complex than those faced by younger adults, and throw up many new challenges - in both assessment and treatment. Within this book Knight and Pachana argue that psychological assessment needs to be more tightly integrated with therapy, especially with older adult clients. Using the Contextual Adult Lifespan Theory for Adapting Psychotherapy (CALTAP) as a framework for applying our knowledge about developmental, social contextual, and cohort/generational factors that influence age differences in response to psychological assessment and therapy, they present an integrated framework for psychological assessment and therapy with older adults."--Publisher's website.
