*Principles, Techniques and Applications in Microsurgery* Dec 23 2021

This book is a comprehensive volume on microsurgery in China. It covers the history, general concepts, equipment and techniques of microsurgery. Unlike other books on the same subject which concentrate mainly on plastic surgery and hand surgery, this book introduces the applications of microsurgical techniques in neurosurgery, gastroenterology and orthopaedic surgery. This is a valuable text as the vast experience of Chinese microsurgery is also included.

Contents: Equipment, Instruments and Materials Used in Microsurgery Basic Techniques and Operative Methods in Microsurgery Microvascular Anastomosis in Animal Experiments The Choice of Anaesthesia for Microsurgery Requirements and Preparations for the Donor and Recipient Areas in Microsurgery Antispasmodics and Anticoagulants Used in Microsurgery Post-Operative Management after Microsurgery Common Causes of Failure in Tissue Transplant and the Preventive Measures Microsurgical Techniques in Neurosurgery Segmental Gut Transplant for Oesophageal

Review: "The volume is a truly comprehensive text and reference-work on microsurgery and its wide applications. It will prove invaluable to both trainee surgeons and experts involved in this far-reaching field." Piero Zannini, M.D. International Surgery, 1988 "The translation into English by P C Leung is good and the volume should interest all those who practise this type of surgery." Annals of the Royal College of Surgeon of England, 1987 **Powerful Patriots** Oct 21 2021 What role do nationalism and popular protest play in China's foreign relations? Chinese authorities permitted anti-American demonstrations in 1999 but repressed them in 2001 during two crises in U.S.-China relations. Anti-Japanese protests were tolerated in 1985, 2005, and 2012 but banned in 1990 and 1996. Protests

over Taiwan, the issue of greatest concern to Chinese nationalists, have never been allowed. To explain this variation, Powerful Patriots identifies the diplomatic as well as domestic factors that drive protest management in authoritarian states. Because nationalist protests are costly to repress and may turn against the government, allowing protests demonstrates resolve and makes compromise more costly in diplomatic relations.

Repressing protests, by contrast, sends a credible signal of reassurance, facilitating diplomatic flexibility. Powerful Patriots traces China's management of dozens of nationalist protests and their consequences between 1985 and 2012. -- Provided by publisher

Populist Authoritarianism Oct 09 2020 In Populist Authoritarianism

Wenfang Tang develops a theory of why Chinese citizens support an authoritarian regime, employing a wealth of data taken from more than two decades' worth of national and cross national surveys. Although China has changed considerably on the surface in the post-Mao era, Tang points to notable continuity from the Chinese Communist Party's revolutionary experiences to its current governing style. He proposes a theoretical framework of "populist authoritarianism" which is characterized by Mass Line ideology accumulation of social capital, public political activism and contentious politics, a paranoid and hyper-responsive government, weak political and civic institutions and a high level of regime trust. The CCP currently enjoys strong public support but such a system is inherently vulnerable. Because drastic changes in public opinion cannot be filtered through political institutions such as elections and the rule of law, these changes can result in system wide political earthquakes. How is it, then that the Communist Party once led by Mao which still adheres to the Marxist-Leninist and nationalist rhetoric of yore-continues to rule with little serious dissent? Marshaling the best evidence that is currently available populist Authoritarianism will reshape our understanding of why the Chinese regime persists despite decades of predictions of its demise.

Membrane Computing Models: Implementations May 28 2022 The theoretical basis of membrane computing was established in the early 2000s with fundamental research into the computational power,

complexity aspects and relationships with other (un)conventional computing paradigms. Although this core theoretical research has continued to grow rapidly and vigorously, another area of investigation has since been added, focusing on the applications of this model in many areas, most prominently in systems and synthetic biology, engineering optimization, power system fault diagnosis and mobile robot controller design. The further development of these applications and their broad adoption by other researchers, as well as the expansion of the membrane computing modelling paradigm to other applications, call for a set of robust, efficient, reliable and easy-to-use tools supporting the most significant membrane computing models. This work provides comprehensive descriptions of such tools, making it a valuable resource for anyone interested in membrane computing models.

**Sweet Potato** Jun 28 2022 Sweet potato (*Ipomoea batatas* L.), the seventh most important food crop after wheat, rice (paddy), maize, potato, barley and cassava, is a staple food in many developing countries of the tropics and sub-tropics, and also serves as animal feed and raw material for several food- and feed -based industries. This New World crop has high biological efficiency of converting solar energy into edible energy (152MJ/ha/day) in form of tuberous (storage) roots and could be the food for the ever growing human population in future. Asia leads in area (60.75%) and production (86.89%) of sweet potato in the world. Sweet potato was originally a herbaceous perennial but was domesticated as an annual and grows best in moderately warm climate and temperature of 21-26oC. It requires light textured soil with the optimum pH of 5.5 -6.5 for good growth of the crop. Current research has focused on development of high starch, high dry matter and coloured ( $\beta$ -carotene and anthocyanin-rich) sweet potato varieties for industrial applications in addition to traditional usage as food and animal feed. Sweet potato storage roots are subjected to several forms of post harvest losses during harvest, transportation from farmers' field to market and in

storage. These are due to mechanical injury, weight loss, sprouting, diseases and pests. The subject, post harvest aspects of sweet potato in food, feed and industries, is a topic of current interest.

**International Historical Statistics Europe 1750-1988** Apr 02 2020  
The European volume of this best selling series provides data from over two centuries for all principal areas of economic and social activity in both Eastern and Western Europe. Recent concern with economic growth has led not only to a vast increase in the quantity and quality of statistics collected and published, but also to an upsurge of interest in the statistics of the past. As attention has turned more and more to the study of the comparative development of different countries, so a need has been felt for a collection of historical statistics comparing different nations. This work meets the need as far as the European continent is concerned. Each section has a short introductory commentary, and extensive notes and footnotes. This unique compilation, now in its third edition and revised and updated to 1988, brings together in a single volume major statistical series which document the growth and development of modern Europe.

**One Story, One Song** May 04 2020 A new collection of warm, wise and inspiring stories from the author of the bestselling *One Native Life*. Since its publication in 2008, readers and reviewers have embraced Richard

Wagamese's *One Native Life*. "In quiet tones and luminous language," wrote the *Winnipeg Free Press*, "Wagamese shares his hurts and joys, inviting readers to find the ways in which they are joined to him and to consider how they might be joined to others." In this new book, Richard Wagamese again invites readers to accompany him on his travels. This time his focus is on stories: how they shape us, how they empower us, how they change our lives. Ancient and contemporary, cultural and spiritual, funny and sad, the tales are grouped according to the four essential principles Ojibway traditional teachers sought to impart: humility, trust, introspection and wisdom.

*Changing Media, Changing China* Feb 10 2021 Thirty years ago, the Chinese Communist Party (CCP) made a fateful decision: to allow newspapers, magazines, television, and radio stations to compete in the marketplace instead of being financed exclusively by the government. The political and social implications of that decision are still unfolding as the Chinese government, media, and public adapt to the new information environment. Edited by Susan Shirk, one of America's leading experts on contemporary China, this collection of essays brings together a who's who of experts--Chinese and American--writing about all aspects of the changing media landscape in China. In detailed case studies, the authors describe how the media is reshaping itself from a propaganda mouthpiece into an agent of watchdog journalism, how politicians are reacting to increased scrutiny from the media, and how television, newspapers, magazines, and Web-based news sites navigate the cross-currents between the open marketplace and the CCP censors. China has over 360 million Internet users, more than any other country, and an

astounding 162 million bloggers. The growth of Internet access has dramatically increased the information available, the variety and timeliness of the news, and its national and international reach. But China is still far from having a free press. As of 2008, the international NGO Freedom House ranked China 181 worst out of 195 countries in terms of press restrictions, and Chinese journalists have been aptly described as "dancing in shackles." The recent controversy over China's censorship of Google highlights the CCP's deep ambivalence toward information freedom. Covering everything from the rise of business media and online public opinion polling to environmental journalism and the effect of media on foreign policy, *Changing Media, Changing China* reveals how the most populous nation on the planet is reacting to demands for real news.

Beyond Aid Sep 07 2020 Post debt relief, the number of African countries considering accessing international capital markets, often to fund large infrastructure projects, is increasing. Potential risks of capital inflows are well known but the literature offers little help to estimate the cost of borrowing internationally for the first time. This paper proposes a two-step approach to estimate the sovereign credit rating and interest rate cost of a country considering borrowing externally. Estimates can be used to assess the costs and benefits of different financing options. The method can also be used to construct foreign currency as well as domestic local currency yield curves.

Membrane Computing Nov 02 2022 Membrane computing is an unconventional model of computation associated with a new computing paradigm. The field of membrane computing was initiated in 1998 by the author of this book; it is a branch of natural computing inspired by the structure and functioning of the living cell and devises distributed parallel computing models in the form of membrane systems. This book is the first monograph surveying the new field in a systematic and coherent way. It presents the central notions and results: the main classes of P systems, the main results about their computational power and efficiency, a complete bibliography, and a series of open problems

and research topics.

**Emotional Choices** Jun 04 2020 Why do states often refuse to yield to military threats from a more powerful actor, such as the United States? Why do they frequently prefer war to compliance? International Relations scholars generally employ the rational choice logic of consequences or the constructivist logic of appropriateness to explain this puzzling behavior. Max Weber, however, suggested a third logic of choice in his magnum opus *Economy and Society*: human decision making can also be motivated by emotions. Drawing on Weber and more recent scholarship in sociology and psychology, Robin Markwica introduces the logic of affect, or emotional choice theory, into the field of International Relations. The logic of affect posits that actors' behavior is shaped by the dynamic interplay among their norms, identities, and five key emotions: fear, anger, hope, pride, and humiliation. Markwica puts forward a series of propositions that specify the affective conditions under which leaders are likely to accept or reject a coercer's demands. To infer emotions and to examine their influence on decision making, he develops a methodological strategy combining sentiment analysis and an interpretive form of process tracing. He then applies the logic of affect to Nikita Khrushchev's behavior during the Cuban missile crisis in 1962 and Saddam Hussein's decision making in the Gulf conflict in 1990-1 offering a novel explanation for why U.S. coercive diplomacy succeeded in one case but not in the other.

Emotional Diplomacy Apr 14 2021 Emotional Diplomacy explores the politics of expressed emotion on the international stage, looking at the ways state actors strategically deploy emotional behavior to manipulate the perceptions of others. By examining diverse instances of emotional behavior, Todd H. Hall reveals that official emotional displays play an integral role in the strategies and interactions of state actors. Emotional diplomacy is more than rhetoric; as this book demonstrates, its implications extend to the provision of economic and military aid, great-power cooperation, and the use of armed force. Hall investigates three strands of emotional diplomacy: those rooted in anger, sympathy, and guilt. His research, drawn on sources and interviews in five different languages, provides new insights into the 1995-1996 Taiwan Strait Crisis, the post-9/11 reactions of China and Russia, and relations between West Germany and Israel after World War II. Emotional Diplomacy offers a unique take on the intersection of strategic action and emotional display, a means for understanding why states behave emotionally. Hall provides the theoretical tools necessary for understanding the nature and significance of state-level emotional behavior through new observations of how states seek reconciliation, strategically respond to unforeseen crises, and demonstrate resolve in the face of perceived provocations.

Current Trends in Bone Grafting Dec 11 2020 Bone grafting is an essential technique in bone and joint surgery. This book covers the

different types of graft, especially the viable ones created with microvascular anastomoses. Both conventional techniques and newer methods are included, with emphasis on the latter. New approaches are highlighted in the application of vascularised bone grafts in post-resection bony reconstruction and of vascularised composite bone grafts in hand reconstruction. With increased awareness of the advantages of bone grafts, surgeons will more readily recognize indications and identify areas of application.

Greenback Era Dec 31 2019 The Greenback Era is not a financial history; rather, it is an attempt to locate the source of political power in the crucial Reconstruction years through a socio-economic study of American financial conflict during the years 1865 to 1879. Originally published in 1964. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. Internal fixation, including intramedullary nailing and the use of external fixation are described. Compound fractures are everyday problems, and the principles of their management

and practical solutions deserve separate discussion. The value of microsurgical techniques has been underestimated by orthopaedic experts and the indications, choices, and procedures need to be put into proper perspectives.
