The Double Helix Jul 29 2019 The classic personal account of Watson and Crick's groundbreaking discovery of the structure of DNA, now with an introduction by Sylvia Nasar, author of A Beautiful Mind. By identifying the structure of DNA, the molecule of life, Francis Crick and James Watson revolutionized biochemistry and won themselves a Nobel Prize. At the time, Watson was only twenty-four, a young scientist hungry to make his mark. His uncompromisingly honest account of the heady days of their thrilling sprint against other world-class researchers to solve one of science's greatest mysteries gives a dazzlingly clear picture of a world of brilliant scientists with great gifts, very human ambitions, and bitter rivalries. With humility unspoiled by false modesty, Watson relates his and Crick's desperate efforts to beat Linus Pauling to the Holy Grail of life sciences, the identification of the basic building block of life. Never has a scientist been so truthful in capturing in words the flavor of his work.

The Man Who Saw Tomorrow Jun 27 2019 The first full-length biography of a brilliant, self-taught inventor whose innovations in information and energy technology continue to shape our world. The Economist called Stanford R. Ovshinsky (1922-2012) "the Edison of our age," but this apt comparison doesn't capture the full range of his achievements. As an independent, self-educated inventor, Ovshinsky not only created many important devices but also made fundamental discoveries in materials science. This book offers the first full-length biography of a visionary whose energy and information innovations continue to fuel our post-industrial economy. In The Man Who Saw Tomorrow, Lillian Hoddeson and Peter Garrett tell the story of an unconventional genius with no formal education beyond high school who invented, among other things, the rechargeable nickel metal hydride batteries that have powered everything from portable electronics to hybrid cars, a system for mass-producing affordable thin-film solar panels, and rewritable CDs and DVDs. His most important discovery, the Ovshinsky effect, led to a paradigm shift in condensed matter physics and yielded phase-change memory, which is now enabling new advances in microelectronics. A son of the working class who began as a machinist and toolmaker, Ovshinsky focused his work on finding solutions to urgent social problems, and to pursue those goals, he founded Energy Conversion Devices, a unique research and development lab. At the end of his life, battered by personal and professional losses, Ovshinsky nevertheless kept working to combat global warming by making solar energy "cheaper than coal"—another of his many visions of a better tomorrow.

Nikola Tesla Jan 27 2022 As a scientist, inventor, and engineer, Nikola Tesla was devoted to discovery, registering over 700 patents in his lifetime. Today, he is mostly celebrated as the father of modern electricity, shaping technology that came after. Tesla's fascinating life story is the focus of this accessible volume, which includes beautifully reproduced documents from Tesla's personal archives. Readers will be especially interested in original diagrams and drawings of his ingenious machines, which—along with comprehensible explanations—will familiarize them with the essential curricular concepts of X-ray, radar, and electricity.

Inventors Sep 30 2019 Meet the masterminds behind the greatest inventions in history with this nonfiction book for kids aged 7 to 9. Step into Leonardo da Vinci's workshop, relax onboard on Hideo Shima's speedy bullet train, and join movie star Hedy Lamarr to bounce ideas around in between takes. Inventors looks at the towering achievements of more than 50 inventors in great detail. The stories are as unusual as they are unique. From Mr. Kellogg, who accidentally created cornflakes after leaving grains boiling for too long, to the ancient Turkish polymath Ismail al-Jazari, who decided the best way to power a clock was with a model elephant, to Sarah E. Goode's fold-up bed space-saving solution—the inventors of this ebook have all used tons of creativity to find ways to improve our world. These groundbreaking inventions include the very earliest discoveries to modern-day breakthroughs in science, food, transportation, technology, toys, and more. Each page is packed with jaw-dropping facts, with every inventor's achievements written as a story. Beautiful illustrations by Jessamy Hawke bring the inventor's stories to life, and fantastic photography highlights the detail of their designs. With incredible hand-painted cross-sections revealing the intricacies of a robotic arm, the first plane, and the printing press, young readers will marvel at being able to see close-up how these amazing machines work. The inventors come from all walks of life and parts of the world, making this the perfect ebook for every budding inventor.

Men of Achievement Inventors Nov 05 2022 In "Men of Achievement", Philip Hubert writes about the famous inventors Benjamin Franklin, Robert Fulton, Eli Whitney, Elias Howe, Samuel Morse, Charles Goodyear, Thomas Edison and Alexander Graham Bell as well as many others. Although it reviews their inventions it also examines the inventor: their origins, hopes, aims, principles, disappointments, trials and triumphs, their daily life and personal character. With over forty-five illustrations, "Men of Achievement" discusses the value of their work - the invention of steam, electricity, the telegraph, telephone, phonograph and the camera and Goodyear's vulcanized rubber. With the patent laws of the time it also highlights how these men contributed thousands of millions of dollars to the nation's wealth and received comparatively nothing in return.

Wonder Women Nov 24 2021 A fun and feminist celebration of the forgotten women in science, technology, and beyond—from the bestselling author of The Fangirl's Guide to the Galaxy You may think you know women's history pretty well. But have you ever heard of: • Alice Ball, the chemist who developed an effective treatment for leprosy—only to have the credit taken by a man? • Mary Sherman Morgan, the rocket scientist whose liquid fuel compounds blasted the first U.S. satellite into orbit? • Huang Dao-po, the inventor whose weaving technology revolutionized textile production in China—centuries before the cotton gin? Smart women have always been able to achieve amazing things, even when the odds were stacked against them. In Wonder Women, author Sam Maggs tells the stories of the brilliant, brainy, and totally rad women in history who broke barriers as scientists, engineers, mathematicians, adventurers, and inventors. Plus, interviews with real-life women in STEM careers, an extensive bibliography, and a guide to women-centric science and technology organizations—all to show the many ways the geeky girls of today can help to build the future. Table of Contents: Women of Science Women of Medicine Women of Espionage Women of Innovation Women of Adventure

Henry Sutton Jul 09 2020 I have no hesitation in claiming Henry Sutton is Australia's greatest ever inventor and, indeed, one of the greatest inventors the world has ever seen. The range of his inventions is extraordinary, including in lighting, batteries, telephony and wireless telegraphy, photography, flight, microscopy, and car engines. Yet he remains shamefully unheralded. Admired and befriended by some of the great scientists and engineers of his time, such as Nikola Tesla and Alexander Graham Bell, his achievements are largely unrecognized. This Australian inventor, working in isolation in Ballarat in the decades around the turn of the 20th century, deserves a place in the pantheon of contributors to the modern technological age.

Great Inventions that Changed the World Feb 02 2020 Discover the inventions that have made our world what it is today A great invention opens the door to a new era in human history. The stone axe, for example, invented some 2 million years ago in East Africa, enabled us to enter the human path of endless improvements through inventions. The taming of fire enabled us to cook food as well as leave the warmth of Africa and move to the frigid lands of the North. From the stone axe to the computer and the Internet, this book provides a fascinating tour of the most important inventions and inventors throughout history. You'll discover the landmark achievements and the men and women that made the world what it is today. Great Inventions That Changed the World is written by Professor James Wei, a renowned educator and engineer who holds several patents for his own inventions. Following an introductory chapter examining the role of inventors and inventions in fueling innovation and global advancement, the book is organized to show how inventions are spurred by human needs and desires, including: Work Food, clothing, and housing Health and reproduction Security As you progress through the book, you'll not only learn about inventions and inventors, but also the impact they have had on our lives and the society and environment in which we live today. Inventions solve problems, but as this book so expertly demonstrates, they can also directly or indirectly create new problems as well, from pollution to global warming to bioterrorism. By enabling us to understand the impact of inventions throughout history, this book can help guide the next generation of citizens, decision makers, and inventors.
