Learning to Educate Aug 18 2021 Learning to Educate: Proposals for the Reconstruction of Education in Developing Countries is a practical and strategic guide for education leaders and others who want to do more to improve the quality of curriculum, learning, teaching, and assessment. The book is also a philosophical guide that articulates and affirms the fundamental values and purposes of education in a rapidly changing world. It confronts us with the opportunity and the necessity to unravel bedrock assumptions and stimulate further discussion about the nature of teaching and learning. What does it take to change mindsets? And how do we bring about "reconstruction" without losing our groundings and bearings? The authors, Ernesto Schiefelbein and Noel McGinn, use the full weight of their extensive knowledge in education research, teaching, policy, and action, to argue that, in order to reconstruct quality education, we must begin by improving its foundation. The result is a seasoned and superbly articulated examination of the principles and practices of teaching and learning, which focuses on the crucial need of all children to learn how to learn. Innovative, cultured, and consistently captivating, this book is bold and, in the field of comparative and international education, unprecedented. "... Current and cutting-edge knowledge on critically important dimensions of effective teaching and learning ..." – N'Dri Thérèse Assié-Lumumba, Cornell University "... A treasury of insights into the education challenge currently proposed by the UN global 2030 Agenda: universal quality learning ..." – Kenneth King, University of Edinburgh "... questions facing educators today ..." – Fernando M. Reimers, Harvard University

Textbook of Pulmonary and Critical Care Medicine Vols 1 and 2 May 03 2020 This book published in two volumes. Both volume divided in twenty three sections, all sections and chapters are most important. The Textbook of Pulmonary and Critical Care Medicine also offers a unique exposure to the problems in many parts of the world. Tuberculosis, the "number one" treatable condition has been extensively covered; and special topics such as multi-drug resistance, directly observed therapy, TB prevention, nonpharmacologic approaches and extapulmonary tuberculosis are particularly relevant. Many countries are facing a growing burden of noncommunicable respiratory diseases. They have become the second leading cause of death after injuries, and their impact on indirect costs such as loss of work and home productivity is enormous. These problems are addressed and measures of prevention such as smoking cessation are included. Other special challenges including topics such as indoor and outdoor air pollution, climate change, poisoning with pesticides, snakebite toxicity, pulmonary manifestations of tropical infections and industrial accidents such as the tragedy seen in Bhopal, Madhya Pradesh, with methyl isocyanate, have been well covered. However, as globalization flattens the playing field, and countries leap to industrialization, cultural beliefs, natural resources, climate and geography have slowed the pace of development in many parts of the world. Poverty leads to malnutrition, homelessness, lack of education, and poor access to health care. Overcrowded cities and rural underdevelopment are other challenges that impact health in the various parts of the world. Moreover, epidemics of HIV, drug abuse and smoking addiction take a greater toll on the population. Yes, the world is flat, but the terrain is filled with mountains and valleys and local problems demand local solutions. And these local problems need to be explored and presented with a scholarly perspective. The Textbook of Pulmonary and Critical Care Medicine has successfully incorporated these sociodemographic factors into the subject matter. The text is well-written and the chapters are carefully referenced with subjects found in all traditional pulmonary and critical care textbooks, e.g. airway diseases, interstitial lung disease, pleural disease, pulmonary neoplasia, pulmonary infection, sleep and critical care. There are several nontraditional sections as well that are practical and especially helpful to the practicing physician. These include a section on the symptom approach to lung disease, an overview of the pharmacologic agents used to treat lung disease, and a comprehensive review of methods in lung diagnosis from the simple history and physical examination to the latest complex tools of interventional pulmonology. The textbook is especially unique because of the abundance of illustrations, flow charts and tables. There are many radiographic and pathologic reproductions that are especially helpful.

Office-Based Endovascular Centers Aug 30 2022 Recent years have seen a rapidly increasing movement of endovascular treatment and procedures away from hospital settings to outpatient venues (office-based labs). Covers all aspects of opening and running an office-based endovascular center, including various models, regulations, capital equipment, quality control, management of safety and complications, marketing and patient satisfaction, and much more. Discusses perspectives of the interventional cardiologist and interventional radiologist, various types of procedures, certification and accreditation, and conducting research in the center. Consolidates today's available information and experience in this timely area into one convenient resource.

Achieving Airport-compatible Land Uses and Minimizing Hazardous Obstructions in Navigable Airspace Nov 20 2021 This report discusses airport compatible land use requirements, the legal issues related to achieving airport compatible land use, and legal issues particular to eliminating hazardous obstructions to airspace. The report concludes by reviewing the major legal issues of concern in achieving airport-compatible land use. While general legal principles relevant to airport land use are well established, they are often applied on a case by case

basis, particularly in the context of regulatory takings and inverse condemnation. This ad hoc analysis introduces, if not an element of unpredictability, at least some variation in the law by jurisdiction. The need for greater predictability highlights the significance of including airport zoning as part of comprehensive land use planning. This report should be helpful to airport administrators, attorneys, board members, financial officers, community members in the vicinity of airports, realtors, and city and county zoning officials.
