Award 2019\* 'Extreme Economies is a revelation - and a must-read.' Andy Haldane,

Chief Economist at the Bank of England To understand how humans react and adapt to economic change we need to study people who live in harsh environments. From death-row prisoners trading in institutions where money is banned to flourishing entrepreneurs in the world's largest refugee camp, from the unrealised potential of cities like Kinshasa to the hyper-modern economy of Estonia, every life in this book has been hit by a seismic shock, violently broken or changed in some way. In his quest for a purer view of how economies succeed and fail, Richard Davies takes the reader off the beaten path to places where part of the economy has been repressed, removed, destroyed or turbocharged. He tells the personal stories of humans living in these extreme situations, and of the financial infrastructure they create. Far from the familiar stock reports, housing crises, or banking scandals of the financial pages, Extreme Economies reveals the importance of human and social capital, and in so doing tells small stories that shed light on today's biggest economic questions. 'A highly original approach to understanding what really makes economies tick.' Mervyn King, former Governor of the Bank of England

World Economic and Financial Surveys Oct 15 2021 This paper discusses commodity prices might serve as a useful leading indicator of inflation, based on the relative importance of flexible auction markets for the determination of these prices. They thus may have a tendency to respond relatively quickly, especially in response to monetary disturbances. Estimation of alternative commodity-price indexes, in which the weights are chosen so as to minimize the residual variance in aggregate inflation regressions, was not fully successful. The commodity prices do have a useful role to play as an aid in predicting inflation, so long as one is careful to interpret the relationships qualitatively and in the context of more general macroeconomic developments. The ratio of consumer to commodity price movements' changes over time, and the relative price of commodities undergoes long sustained swings; nonetheless, the qualitative linkages are quite evident in the data. Perhaps most importantly, turning points in commodity-price inflation frequently precede turning points in consumer-price inflation for the large industrial countries as a group.

*Graced by Waters* Sep 14 2021 In this inspirational and humorous collection of essays, author John Dietsch sees his addiction to and passion for fishing as a parable that can help us shift from compulsive thinking to mindfulness and a closer connection to God. From creating fishing scenes on the set of *A River Runs Through It* in Montana, to directing fly fishing shows in New Zealand and from exploring deep canyons in California to guiding in Colorado, John shares his experiences and asks the question: what are we really fishing for? Through John's journeys across the globe, we discover that the same pursuit in fishing—of what is elusive but attainable—can be applied to our own spiritual journey. In the end, Dietsch uncovers his own truth under the rocks of a childhood river, recognizing the loss of both his brothers as the path of acceptance and faith that is graced by waters.

*Salvadoran Imaginaries* Jun 11 2021 Ravaged by civil war throughout the 1980s and 1990s, El Salvador has now emerged as a study in contradictions. It is a country where urban call centers and shopping malls exist alongside rural poverty. It is a land now at peace but still grappling with a legacy of violence. It is a place marked by deep social divides, yet offering a surprising abundance of inclusive spaces. Above all, it is a nation without borders, as widespread emigration during the war has led Salvadorans to develop a truly transnational sense of identity. In *Salvadoran Imaginaries*, Cecilia M. Rivas takes us on a journey through twenty-first century El Salvador and to the diverse range of sites where the nation's postwar identity is being forged. Combining field ethnography with media research, Rivas deftly toggles between the physical spaces where the new El Salvador is starting to emerge and the virtual spaces where Salvadoran identity is being imagined, including newspapers, literature, and digital media. This interdisciplinary approach enables her to explore the multitude of ways that Salvadorans negotiate between reality and representation, between local neighborhoods and transnational imagined communities, between present conditions and dreams for the future. Everyday life in El Salvador may seem like a simple matter, but Rivas digs deeper, across many different layers of society, revealing a wealth of complex feelings that the nation's citizens have about power, opportunity, safety, migration, and community. Filled with first-hand interviews and unique archival research, *Salvadoran Imaginaries* offers a fresh take on an emerging nation and its people.

**Greater Cincinnati Religious Peacemakers** Sep 02 2020 Throughout human history, wars and violence have often been waged in the name of religions and in the name of diverging religious beliefs and belonging. Ironically, though, all religions in their teachings speak of nonviolence and have in common the promotion of peace and justice, namely the respect of human life and dignity, the institution of human rights, the protection of the poor and vulnerable, the freeing of the

oppressed, the active elimination of injustice? It seems therefore, that violence and wars would be antithetical to religions; yet they are so frequently used as their justification. Are we then speaking of different "religions"? "Institutional religions," the ones structured by humans and that are brandished to lead violence and wars, become in fact quite foreign to the essence of the religions as they were established by their founders and that they intend to represent; they actually contribute to their destruction. Wanting to reflect on that point, I embarked, a few years ago, on giving voice to local religious individuals, whom I called "Religious Peacemakers," and who, each by living the essential teachings of their particular faith, contributed by their actions to peace and justice. I wanted to prove that their path, irrespective of their original religion, would be similar, and that their diverse faith, instead of separating them, would on the contrary end up uniting them.

The Tobacco Epidemic Feb 19 2022 A Karger 'Publishing Highlights 1890-2015' title Today it is a well-established fact that cigarette smoking is fundamentally a form of addiction to the drug nicotine. However, this does not mean that smoking can entirely be explained in terms of pharmacological factors - as with any drug addiction, social, economic, personal and political influences all play an important part in determining patterns of prevalence and cessation. This publication provides a comprehensive, up-to-date review of tobacco smoking. Written by internationally acknowledged experts, the 15 chapters of the book cover the history, economics, epidemiology, and psychology of tobacco use. The medical consequences of both active and passive smoking are discussed in detail, and the pharmacological and behavioral aspects of nicotine dependence are highlighted. Several chapters focus on smoking cessation, examining patterns and predictors of cessation in the general population and the role of GPs, nurses and pharmacists, and evaluating nicotine replacement therapy and other drugs, as well as the role of smokeless tobacco. Measures to prevent smoking such as smoke-free environments, advertising bans, and price increases are also considered. Finally, recommendations are given to change legislation concerning tobacco products in order to most effectively reduce the harm associated with nicotine use. This book is a must for anyone in the medical profession interested in smoking-related issues. Due to its easy readability and topicality, it will also appeal to nonmedical readers.

**Model T Ford Service** Nov 28 2022 Henry Ford's Model T forever changed the world. The car made "for the great multitude" (as Ford put it) first debuted in 1908 and proved so affordable and so popular that fifteen million were sold through 1927. The "Tin Lizzie" was the first automobile to be mass-produced on moving assembly lines, and built using interchangeable parts. It proved tough and reliable in everyday use, and cheap enough to spawn the automobile revolution: the car cost \$850 in 1909 but amazingly by the 1920s, the price had dropped to a mere \$260 due to the perfection of production techniques and economy of scale. Designed by a team that included Childe Harold Willis, Joseph Galamb and Eugene Farkas, the Model T had a front-mounted four-cylinder engine that produced 20 hp and had a top speed of 45 mph. It was a rear-wheel drive vehicle with wooden wheels, and featured a two-speed transmission plus a reverse gear. Although models varied - and many revisions took place over two decades of production - the original version weighed about 1200 pounds. Created in the 1920s and featuring information about the original Model T and the "New Model T" of 1925, this maintenance manual is an invaluable resource. It was originally intended to educate the men tasked with assembling, repairing and maintaining the Model T, and offers a plethora of information about the car, its design and operation. The text includes chapters on how to take apart and put together the car, how to overhaul the engine and transmission, valve grinding and carbon removal, rod bearings, fitting pistons and rings, correcting noisy timing gears, installation of camshaft bearings, cleaning oil lines, oil leaks, transmission band installation, axle overhauls, refurbishing and replacing springs, radiator repair, starting motor overhaul, and more. It also includes troubleshooting and general servicing information. A must have for any Model T owner, this book is also a terrific reference for the docent, historian, or anyone who ever wondered, "how did that work?"

Electronic Circuits with MATLAB, PSpice, and Smith Chart Sep 26 2022 Provides practical examples of circuit design and analysis using PSpice, MATLAB, and the Smith Chart This book presents the three technologies used to deal with electronic circuits: MATLAB, PSpice, and Smith chart. It gives students, researchers, and practicing engineers the necessary design and modelling tools for validating electronic design concepts involving bipolar junction transistors (BJTs), field-effect transistors (FET), OP Amp circuits, and analog filters. Electronic Circuits with MATLAB®, PSpice®, and Smith Chart presents analytical solutions with the results of MATLAB analysis and PSpice simulation. This gives the reader information about the state of the art and confidence in the legitimacy of the solution, as

long as the solutions obtained by using the two software tools agree with each other. For representative examples of impedance matching and filter design, the solution using MATLAB and Smith chart (Smith V4.1) are presented for comparison and crosscheck. This approach is expected to give the reader confidence in, and a deeper understanding of, the solution. In addition, this text: Increases the reader's understanding of the underlying processes and related equations for the design and analysis of circuits Provides a stepping stone to RF (radio frequency) circuit design by demonstrating how MATLAB can be used for the design and implementation of microstrip filters Features two chapters dedicated to the application of Smith charts and two-port network theory Electronic Circuits with MATLAB®, PSpice®, and Smith Chart will be of great benefit to practicing engineers and graduate students interested in circuit theory and RF circuits.

**Republic of Latvia** Jan 18 2022 This Selected Issues paper analyses the implications of global value chains (GVC) participation for Latvia's competitiveness and exposure to risks. Using a structural model, it assesses Latvia's competitiveness through different real effective exchange rate (REER) measures and examines the main factors behind differences in the measures. Based on this analysis, the paper suggests policy options to strengthen Latvia's competitiveness. The paper also estimates the impact of an appreciation of the GVC related REER measure on value added export growth and real GDP growth, and finds sizable effects, suggesting that a rapid labor market tightening could lead to erosion in competitiveness and reduction in growth. Finally, trade tension induced tariff hikes may have significant cost for Latvia, especially in terms of value added produced in the country. Trade tension induced tariff hikes are likely to have moderate costs for Latvia in terms of value added produced in the country. In this regard, policies aimed at enhancing product sophistication or quality and export market diversification could mitigate Latvia's exposure to trade shocks in GVCs.

Green Boating Apr 09 2021 The coastal and archipelago areas in the Baltic Sea are popular destinations for a number of tourists. An important group of tourists is boaters, who visit the coastal areas during a short summer period. Boat owners are sometimes pictured as having a great interest for the nature and a willingness to do right. Pollution from pleasure boats such as discharges of oil and fuel, antifouling paints and cleaning agents have a negative impact on the coastal environment. Environmentally sound alternatives exist to some extent, but are not very common. Sustainable alternatives for boaters are lacking behind. One of the underlying purposes of this study was to understand how we can help boat owners change their behaviour and decrease the negative impact on the marine environment. The survey among boaters has been conducted in Finland, Sweden and Denmark with a web based survey ordered by the Keep Sweden Tidy Foundation together with Keep the Archipelago Tidy Association in Finland and the Danish Outdoor Council. The research was performed by SIFO Research International.

*Human Resource Development Successful Factors* Oct 03 2020 Recruitment, selection and talent management stages include: Internal factors and external factors bring to workforce planning staffing needs options: internal via external brings to recruitment attraction via sources brings to applicant pool brings to selection assessment brings to job performance measurement brings to job analysis brings to workforce planning staffing needs opinions in cycle processing again. Capable people who will apply for jobs within a organization. First, there is a need to attract people's interest in applying for employment. It implies that people have a choice about which organizations they wish to work for, even though during times of recession such choices might be limited. People may be capable of fulfilling a role in employment, but the extent to which this will be realized is not totally predictable. How capability is understood is increasingly determined by an

organization's approach to talent management and development. Under different labour market conditions, power in recruitment process will change between buyers and sellers of labour, the employers and employees respectively. Thus, in conditions of recession, employers are likely to reduce recruitment budgets and costs, paying more attention to developing the talent that has already been employed. Online recruitment Budgetary factors will also affect how recruitment channels are used, with more use of online recruitment. For example, the ageing profile of the workforce around the world requires an adjustment of recruitment policies, the use of the internet and agencies for recruitment reflected to younger applicants, whereas older workers were more dependent on formal channels of recruitment, such as newspapers and journals. In addition, there have been many more graduates leaving university, and graduate employment is becoming very competitive. Many graduates will take longer to find employment that matches their skills. This might affect perceptions of the value to be gained from studying for a degree compared with the price of a degree. There is a difference, however, in what recruiters think is important to this generation and what the generation itself thinks. Although HR policies will be designed to achieve particular organizational targets and goals, those policies will also provide an opportunity for individual needs and be satisfied. This view assumes that a fit between a person and the environment can be found so that their commitment and performance will be enhanced. This is an indication that the person to environment fit includes a person to organization fit, person to group fit and person to environment fit. If there is a match between the values within each of those areas expressed by the organization at the recruitment stage. The organization and the new recruits have a clear employees and can therefore manage those expectations. HRM could help to shape the direction of change, influence culture and help bring about the mindset that would decide which strategic issues are considered. HR considerations, including the results of a review of the quantity and quality of people, the goals, objectives and targets whether they can achieve performance in an organization and for how work is organized into roles and jobs. There has been a rapid growth in online recruitment, e-recruitment. As a result, organizations are advised to consider the design of websites and the terms that applicants might use to carry out job and vacancy searches. The usability of a company's website affects an applicant's perception of a job, with a focus on hyperlinks and text rather than graphic images and navigation links. However, issues with e-recruitment, including the one-way communication system, the fact that it is impersonal and passive, and the fact that it creates an artificial distance between the individual and the company. recruitment agent
