The Clothing of Books Oct 31 2022 How do you clothe a book? In this deeply personal reflection, Pulitzer Prize-winning author Jhumpa Lahiri explores the art of the book jacket from the perspectives of both reader and writer.

Probing the complex relationships between text and image, author and designer, and art and commerce, Lahiri delves into the role of the uniform; explains what book jackets and design have come to mean to her; and how, sometimes, "the covers become a part of me."

U.S. Army Uniforms and Equipment, 1889 Apr 12 2021 This rare book contains not only complete specifications but detailed line drawings of virtually every item of uniform and equipment issued. It is a valuable reference for articles used during the 1870s and 1880s, the period of the Indian wars. For much of the nineteenth century, the production of military clothing and equipment was geared to national emergencies. During the Mexican and Civil wars, the hardpressed Quartermaster Department was forced to rely on civilian and, later, European suppliers. A contract system too often resulted in profiteering, inferior goods, and administrative confusion. By 1887 reforms in the system were accompanied by strict specifications for matériel, which were published by the War Department in 1889 and distributed to fewer than sixty officers in the Quartermaster Department. Never before reprinted, this rare book contains not only complete specifications but detailed line drawings of virtually every item of uniform and equipment issued, from mosquito bars and tent stoves to overalls for mounted men and uniform coat buttons ("the burnishing to be done in the best manner known to the trade"). This valuable reference for articles used by the army during the period of the Indian wars will be of special interest to collectors, historians, archaeologists, curators, and antique dealers.

The Degrowth Economy. Strategic Path for Clothing Brands ? Future and Empowerment Model for Fashion Consumers? Feb 20 2022 Master's Thesis from the year 2021 in the subject Business economics - Offline Marketing and Online Marketing, grade: 1, AMD Akademie Mode & Design GmbH (Fresenius University), language: English, abstract: This thesis aims to develop degrowth-oriented business models for fashion brands that could not only bring competitive advantage to these organizations, but also drive the achievement of the Sustainable Development Goals defined by the United Nations in 2015. The outcome of this thesis provides a range of design options and strategies that can be implemented by fashion brands in the degrowth framework, combined within a custom-buildable business model matrix. An empirical research conducted with both qualitative and quantitative data assessed the developed business model matrix based on nine existing fashion organizations. The results showed the existence of three observable business model archetypes presenting strong similarities with the proposed model, however always limited to a very reductive approach of the degrowth economy. The degrowth economy has long been undervalued by businesses, considering prosperity without growth as an impossible match. With the rising pressures imposed by climate change, the new transformative challenges the fashion industry is facing and current shifts in consumers purchasing behaviors, the degrowth economy debate appears as a relevant opportunity to initiate systemic change within the fashion industry. This research highlights the need and relevance for the development of fashion business models using a more holistic approach of the degrowth economy, now given possible thanks to the translation of degrowth concepts and ideas into implementable business strategies. It suggests that fashion brands could get strong competitive advantages by following these recommendations and by acting as pioneers in a field that goes beyond the current understanding of sustainability in the fashion industry.

Factors Influencing Consumers' Intention to Purchase Clothing Online Dec 29 2019 Master's Thesis from the year 2011 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1.0, , course: Marketing, language: English, abstract: This dissertation is a study in the area of e-commerce. The aim of this study was to examine the adoption of online shopping and online shopping for clothing in particular and factors influencing the intention to purchase clothing online. A quantitative research method was used and a questionnaire designed on the website www.surveymonkey.com and then distributed by sending out the link leading to the survey via facebook and emails. 94 useful questionnaires were gathered from female and male UK students. SPSS 17 was used to analyse the collected data by conducting chi-square tests and Spearman's rho correlation tests to examine the relation between different variables. The constructs of the technology acceptance model (TAM) were used as a framework and basis for this research and were extended by further constructs. Therefore, the impact of perceived usefulness, perceived ease of use, prior online shopping experience, perceived risk and product involvement on the intention to purchase clothing online was analysed. Perceived usefulness, perceived ease of use and prior online shopping experience had positive effects on the intention to purchase clothing online. Perceived risk had a negative effect on the intention to purchase clothing online. These findings supported the hypotheses. Other than hypothesised, clothing product involvement did not have a significant positive effect on the intention to purchase clothing online.

Design of Clothing Manufacturing Processes Sep 05 2020 The era of mass manufacturing of clothing and other textile products is coming to an end; what is emerging is a post-industrial production system that is able to achieve the goal of mass-customised, low volume production, where the conventional borders between product design, production and user are beginning to merge. To continue developing knowledge on how to design better products and services, we need to design better clothing manufacturing processes grounded in science, technology, and management to help the clothing industry to compete more effectively. Design of clothing manufacturing processes reviews key issues in the design of more rapid, integrated and flexible clothing manufacturing processes. The eight chapters of the book provide a detailed coverage of the design of clothing manufacturing processes using a systematic approach to planning, scheduling and control. The book starts with an overview of standardised clothing classification systems and terminologies for individual clothing types. Chapter 2 explores the development of standardised sizing systems. Chapter 3 reviews the key issues in the development of a garment collection. Chapters 4 to 7 discuss particular aspects of clothing production, ranging from planning and organization to monitoring and control. Finally, chapter 8 provides an overview of common quality requirements for clothing textile materials. Design of clothing manufacturing processes is intended for R&D managers, researchers, technologists and designers throughout the clothing industry, as well as academic researchers in the field of clothing design, engineering and other aspects of clothing production. Considers in detail the design of sizing and classification systems Discusses the planning required in all aspects of clothing production from design and pattern making to manufacture Overviews the management of clothing production and material quality requirements

Compatibility Modeling Aug 05 2020 Nowadays, fashion has become an essential aspect of people's daily life. As each outfit usually comprises several complementary items, such as a top, bottom, shoes, and accessories, a proper outfit largely relies on the harmonious matching of these items. Nevertheless, not everyone is good at outfit composition, especially those who have a poor fashion aesthetic. Fortunately, in recent years the number of online fashion-oriented communities, like IQON and Chictopia, as well as e-commerce sites, like Amazon and eBay, has grown. The tremendous amount of real-world data regarding people's various fashion behaviors has opened a door to automatic clothing matching. Despite its significant value, compatibility modeling for clothing matching that assesses the compatibility score for a given set of (equal or more than two) fashion items, e.g., a blouse and a skirt, yields tough challenges: (a) the absence of comprehensive benchmark; (b) comprehensive compatibility modeling with the multi-modal feature variables is largely untapped; (c) how to utilize the domain knowledge to guide the machine learning; (d) how to enhance the interpretability of the compatibility modeling; and (e) how to model the user factor in the personalized compatibility modeling. These challenges have been largely unexplored to date. In this book, we shed light on several state-of-the-art theories on compatibility modeling. In particular, to facilitate the research, we first build three large-scale benchmark datasets from different online fashion websites, including IQON and Amazon. We then introduce a general data-driven compatibility modeling scheme based on advanced neural networks. To make use of the abundant fashion domain knowledge, i.e., clothing matching rules, we next present a novel knowledge guided compatibility modeling framework. Thereafter, to enhance the model interpretability, we put forward a prototype wise interpretable compatibility modeling approach. Following that, noticing the subjective aesthetics of users, we extend the general compatibility modeling to the personalized version. Moreover, we further study the real-world problem of personalized capsule wardrobe creation, aiming to generate a minimum collection of garments that is both compatible and suitable for the user. Finally, we conclude the book and present future research directions, such as the generative compatibility modeling, virtual try-on with arbitrary poses, and clothing generation.

God's Design for Clothing Feb 29 2020 The matter of what kind of clothing one ought or ought not to wear has brought about much controversy and disagreement among believers and unbelievers alike. It seems everyone has his or her own ideas and standards for dress. Upon what authority or standard do we base our beliefs and make our decisions concerning dress? This book is written primarily with the Christian in mind. In the area of clothing the Christian has become increasingly like the world. We are to be in this world, but not of this world. When the church is in the world as salt and light, that is one thing, but when the world is in the church that is something else. Take a bold look at yourself and compare your wardrobe with Scripture. Do you look and act like the world? Or do you dress to glorify Christ? This book will help you to work through the Scriptures dealing with this critical subject.

Clothing Appearance and Fit Apr 24 2022 Fashion and beauty have helped shape history and today more than ever, we find ourselves under increasing pressure to think about what we wear, what we look good in and how best to enhance our body shape and size. Behind this seemingly superficial industry, however, lies a technical thinking firmly grounded in science and technology. In one fully comprehensive book, *Clothing appearance and fit: Science and technology* provides a critical appreciation of the technological developments and scientific understanding of the appearance and fit of clothing. The authors bridge the science of beauty and fashion design with garment evaluation technology, garment drape and human anthropometrics and sizing. The ten chapters of the book provide a detailed coverage of clothing appearance and fit. Chapter 1 considers body attractiveness and how it relates to clothing material and design parameters and discusses classical and contemporary theories of beauty. Chapters 2 and 3 present the industry's techniques, methods and standards for assessing clothing appearance and fit and Chapters 4 and 5 review the research and development of objective measurement technologies for evaluating clothing appearance and fit. Fabric objective measurement, fabric properties and garment drape are covered in Chapters 6 and 7 and the R & D of body measurement, anthropometrics and sizing systems are detailed in Chapters 8 and 9. The final chapter reviews published work on garment design and pattern alteration for achieving good clothing appearance and fit. This book is an essential reference for researchers, academics, professionals and students in clothing and textile academia and industry. It includes many industrial standards, techniques and practices. Offers a critical appreciation of technological developments Incorporates user-friendly illustrations and photographs Valuable reference for students, researchers and professionals in the clothing and textile industries

Making, Selling and Wearing Boys' Clothes in Late-Victorian England Jul 16 2021 There has been a great deal of recent interest in masculine clothing, examining both its production and consumption, and the ways in which it was used to create individual identities and to build businesses, from 1850 onwards. Drawing upon a wide range of sources this book studies the interaction between producers and consumers at a key period in the development of the ready-made clothing industry. It also shows that many innovations in advertising clothing, usually considered to have been developed in America, had earlier British precedents. To counter the lack of documentary evidence that has hitherto hampered research into the dress practices of non-elite groups, this book utilises thousands of unpublished visual documents. These include hundreds of manufacturers' designs, which underline an unexpected degree of investment by manufacturers in boys' clothing, and which was matched by heavy investment in advertising, with thousands of images of boys' clothing for shop catalogues in the Stationers' Hall copyright archive. Another key source is the archives of Dr Barnardo's Homes. This extraordinary collection contains over 15,000 documented photographs of boys entering between 1875 and 1900, allowing us to look beyond official polarization of 'raggedness' and 'respectability' used by charities and social reformers of all stripes and to establish the clothing that was actually worn by a large sample of boys. A close analysis of 1,800 images reveals that even when families were impoverished, they strove to present their boys in ways that reflected their position in the family group and in society. By drawing on these visual sources, and linking the design and retailing of boys' clothing with social, cultural and economic issues, this book shows that an understanding of the production and consumption of the boys clothing is central to debates on the growth of the consumer society, the development of mass-market fashion, and concepts of childhood and masculinity.
