**Ekphrastic Image-making in Early Modern Europe, 1500–1700** Jul 21 2022 This volume examines how and why many early modern pictures operate in an ekphrastic mode.

**Memory, Metaphor, and Aby Warburg's Atlas of Images** Mar 17 2022 The work of German cultural theorist and art historian Aby Warburg (1866–1929) has had a lasting effect on how we think about images. This book is the first in English to focus on his last project, the encyclopedic Atlas of Images: Mnemosyne. Begun in earnest in 1927, and left unfinished at the time of Warburg's death in 1929, the Atlas consisted of sixty-three large wooden panels covered with black cloth. On these panels Warburg carefully, intuitively arranged some thousand black-and-white photographs of classical and Renaissance art objects, as well as of astrological and astronomical images ranging from ancient Babylon to Weimar Germany. Here and there, he also included maps, manuscript pages, and contemporary images taken from newspapers. Trying through these constellations of images to make visible the many polarities that fueled antiquity's afterlife, Warburg envisioned the Atlas as a vital form of metaphoric thought. While the nondiscursive, frequently digressive character of the Atlas complicates any linear narrative of its themes and contents, Christopher D. Johnson traces several thematic sequences in the panels. By drawing on Warburg's published and unpublished writings and by attending to Warburg's cardinal idea that "pathos formulas" structure the West's cultural memory, Johnson maps numerous tensions between word and image in the Atlas. In addition to examining the work itself, he considers the literary, philosophical, and intellectual-historical implications of the Atlas. As Johnson demonstrates, the Atlas is not simply the culmination of Warburg's lifelong study of Renaissance culture but the ultimate expression of his now literal, now metaphoric search for syncretic solutions to the urgent problems posed by the history of art and culture.

**The Lost Constellations** Mar 05 2021 Casual stargazers are familiar with many classical figures and asterisms composed of bright stars (e.g., Orion and the Plough), but this book reveals not just the constellations of today but those of yesteryear. The history of the human identification of constellations among the stars is explored through the stories of some influential celestial cartographers whose works determined whether new inventions survived. The history of how the modern set of 88 constellations was defined by the professional astronomy community is recounted, explaining how the constellations described in the book became permanently "extinct." Dr. Barentine addresses why some figures were tried and discarded, and also directs observers to how those figures can still be picked out on a clear night if one knows where to look. These lost constellations are described in great detail using historical references, enabling observers to rediscover them on their own surveys of the sky. Treatment of the obsolete constellations as extant features of the night sky adds a new dimension to stargazing that merges history with the accessibility and immediacy of the night sky.

Housesteads Roman Fort - the Grandest Station Aug 18 2019 Housesteads is one of the most important forts on Hadrian's Wall. Extensive excavations were carried out between 1874 and 1981 by Newcastle University. Combining the results with those of excavations done between 1959 and 1961 by Durham University, we now have a complete plan of the north-east part of the fort. These excavations uncovered principally Buildings XIII, XIV and XV, plus stretches of rampart between the north and east gates, along with a multitude of features and stratigraphic evidence, revealing not only the sequences but also large finds assemblages. In addition to shedding much light on the material culture of the fort's occupants and the structural and chronological relationships between various parts of the fort, limited reinvestigation of Building XIV and excavating of the east end of Building XV enabled significant reinterpretation of the original conclusions reached by the Durham investigators, including some redating of structures. These excavations uncover the full 300-year period during which the fort formed an integral part of the Roman military frontier, for much if not all of that time the base of the cohort I Tungrorum milliaria peditum. This report documents the excavations and gives full finds reports, and the analysis of the evidence has enabled the authors to provide a full history of this part of the fort. *Klockhaus' kaufmännisches Handels- und Gewerbe-Adressbuch des Deutschen Reichs Feb 16 2022*

**Untersuchungen zu pWestcar Oct 24 2022** Mit diesen Untersuchungen wird die Neubearbeitung eines der zentralen Texte der Ägyptischen Literaturgeschichte vorgelegt. Die Editio Princeps von pWestcar durch Adolf Erman datiert in das Jahr 1890, und umso erstaunlicher ist es, dass es in den vergangenen mehr als 100 Jahren keine neue umfassende Studie zu diesem Text gegeben hat. Nach einer Einleitung, der Transkription und Übersetzung des Textes, einer philologisch-paläographischen Analyse, die sich den vielen sprachlichen Problemfeldern des Textes widmet, folgt eine literaturwissenschaftliche Analyse, wobei hier dezidiert Methoden aus anderen Disziplinen aufgegriffen und verwendet werden. Sowohl die Struktur als auch die verwendete Sprache des Textes stehen hier im Vordergrund. Eine zusammenfassende Gesamtbetrachtung sucht schliesslich Antworten auf die Fragen nach Komposition und Funktion(en) des Textes.

*The Automotive Industry and the Environment Aug 10 2021* The automotive industry currently faces huge challenges. The fundamental technological paradigm it relies on, volume production, has become progressively more unprofitable in the face of increasingly segmented niche markets. At the same time it faces increasing regulatory and social pressures to improve both the sustainability of its products and methods of production. Building on a wealth of research, The automotive industry and the environment addresses those challenges and how they can be met in producing a sustainable and profitable industry for the future. The authors first discuss the development of the automotive industry and the problems it currently faces. They then consider the solutions the industry can adopt. The book reviews trends in more environmentally-friendly technologies such as the use of more sustainable fuel sources and new types of modular design with built-in recyclability. However, these technologies can only be fully exploited if methods of manufacture change. The book also describes models of decentralised production, particularly the micro factory retailing (MFR) model, which provide an alternative to volume production and promise to be both more sustainable and more profitable. The automotive industry and the environment provides both a cogent diagnosis of the environmental and other problems facing the industry and a blueprint for a better future. It will be widely welcomed by the industry, policy makers and all those concerned with sustainable transport. Addresses the challenges facing the automotive industry, from the increasing unprofitability of volume production to regulatory and social pressures to improve environmental and product sustainability Examines how the automotive industry can meet the current challenges in producing a sustainable and profitable industry for the future Reviews trends in more environmentally-friendly technologies such as the use of more sustainable fuel sources and new types of modular design with built-in recyclability
