GSN - The Goal Structuring Notation Jul 09 2020 Goal Structuring Notation (GSN) is becoming increasingly popular; practitioners use it in the railway, air traffic management and nuclear industries, amongst others. Originally developed to present safety assurance arguments, GSN need not be restricted to safety assurances only; in principle, you can use it to present (and test) any argument. Anyone wishing to support, or refute, a claim can use GSN. Written by an experienced practitioner, The Goal Structuring Notation is both for those who wish to prepare and present compelling arguments using the notation, and for those who wish to review such arguments critically and effectively. To emphasise the versatility of this approach The Goal Structuring Notation presents examples and questions based on diverse subject areas including Business Management, Drama, Engineering, Politics and Astrobiology. Simple examples introduce each symbol of the notation before introducing more complex structures which illustrate how the symbols work together in practical scenarios. To aid learning, questions and problems augment the text, so that the reader may reflect upon and try out the new concepts and principles presented. As a comprehensive instruction in the basics of GSN and its application, The Goal Structuring Notation also serves as a reference or manual for the practitioner to dip into as problems are encountered or as a key resource for engineers working in those industries which require a clear description of the notation, covering the initial principles and showing why each piece of the notation is necessary. Originally developed to present safety assurance arguments, GSN need not be so restricted. GSN - The Goal Structuring Notation presents examples from diverse subject areas, including business management, drama, engineering, politics and astrobiology.

Design Theory and Computer Science Apr 17 2021 The author examines logic and methodology of design from the perspective of computer science. Computers provide the context for this examination both by

discussion of the design process for hardware and software systems and by consideration of the role of computers in design in general. The central question posed by the author is whether or not we can construct a theory of design.

Listening Ear Trainer - User's Manual (v1.06) Jan 15 2021 To train your ear, one must learn to distinguish sounds. Acquiring Perfect Pitch requires in addition to remember pitches. In early childhood we collect the vast part of our relevant sound memory by imitating the sounds with our vocal cords. However, our brain doesn't stop there. At a later age we can still learn a new foreign language. Three new methods to acquire Absolute Pitch and Relative Pitch, supported by software feedback, are presented in this book. The first method, the Singing Funnel method, lets you acquire Absolute Pitch like a foreign language. The second method, the Octave Anchor Pitch method helps you to orientate yourself in the pitch realm. The last method, the Interval Overtone method, improves your interval hearing.
