The Use of Coercive Measures in Forensic Psychiatric Care Nov 02 2022 This book presents the legal context and describes the ethical and practical challenges when using coercive measures in forensic psychiatric settings. A wide range of aspects relevant to the use of such measures, including environmental, patient-related, and staff-related factors, are explored, and the experience of coercive interventions is described from the staff and the patient perspective. Differences in jurisdictions and examples of good practice are highlighted. The authors are from a range of professional backgrounds, ensuring breadth as well as depth in discussion of the topic. The use of coercive measures, in particular restraint, seclusion, and involuntary medication, for the control of aggression in psychiatry remains controversial. Forensic mental health care deals with individuals who pose a risk to others and often present with significant management problems within institutions. The care of patients in these settings gives rise to debates about the balance between care and safety, and between the interests of the patients and those of the wider society to be protected. Despite these tensions, limited research has been conducted specifically on the use of coercive measures in forensic mental health care. This volume aims to fill the gap and will be of value to all professionals working in forensic psychiatric settings as well as to those working in general psychiatric and custodial settings, law professionals, and patients.

Economic Crisis, Health Systems and Health in Europe: Impact and Implications for Policy Oct 28 2019 Economic shocks pose a threat to health and health system performance by increasing

people's need for health care and making access to care more difficult - a situation compounded by cuts in public spending on health and other social services. But these negative effects can be avoided by timely public policy action. While important public policy levers lie outside the health sector, in the hands of those responsible for fiscal policy and social protection, the health system response is critical. This book looks at how health systems in Europe reacted to pressure created by the financial and economic crisis that began in 2008. Drawing on the experience of over 45 countries, the authors: analyse health system responses to the crisis in three policy areas: public funding for the health system; health coverage; and health service planning, purchasing and delivery assess the impact of these responses on health systems and population health identify policies most likely to sustain the performance of health systems facing financial pressure explore the political economy of implementing reforms in a crisis The book is essential reading for anyone who wants to understand the choices available to policy-makers - and the implications of failing to protect health and health-system performance - in the face of economic and other forms of shock.

The Essen Climate Evaluation Schema EssenCES Jun 16 2021 The social atmosphere in forensic hospitals and prisons is crucial to their success - this "manual and more" shows how to assess the climate and identify ways of improving it. The social climate in settings such as forensic psychiatric hospitals and prisons is crucial to their success. The Essen Climate Evaluation Schema (EssenCES) described here is a short, well-validated questionnaire that measures three essential facets of an institution's social atmosphere. An overview of the EssenCES is followed by detailed advice on how to administer and score it and how to interpret findings, as well as reference norms from various countries and types of institution. The EssenCES "manual and more" is thus a highly useful tool for researchers, clinicians, and service managers working in forensic settings.

EBOOK: European Child Health Services and Systems: Lessons without Borders Jul 18 2021 The book will focus on three key aspects of delivery of child health services: service integration and coordination, public health measures, and enhancing the quality of care for children. Taking a child-centric view on understanding how health services and systems work the book aims to contribute towards improving children's health through deepening the understanding of children's health services. Focusing primarily on the western European countries the book draws on research conducted with child health leaders in ten countries: Austria, Britain, Finland, France, Israel, Italy, Netherlands, Norway, Poland, and Sweden. The chapters include clinical scenarios designed to help identify and describe the various ways in which children and their families negotiate health services when dealing with twelve different conditions. Using clinical scenarios in this way allows the book authors to capture the diverse aspects of each health system as well as assessment and analysis of the challenges involved in each, and their successes and failures.

The Stigma of Mental Illness Jan 24 2022 Stigma is one of the major barriers to care for people with mental health and related disorders. Stigma includes negative beliefs about and hostile perceptions towards others, shame and self-stigma, discriminatory practices in hiring, promotion and recognition of people who suffer from mental health challenges, and structural and organizational policies and processes that result in inequalities for people who have mental health challenges. Stigma has been recognized as a significant factor in the well-being of people with mental health

and related problems and can be more debilitating than the direct effects of mental health problems themselves. The Mental Health Commission of Canada (MHCC) was established to conduct policy reviews and to promote initiatives related to mental health. The Opening Minds program of the MHCC is the largest systematic effort in Canadian history to reduce stigma related to mental illnesses. The program has adopted the systematic development, evaluation and deployment of targeted programs based on theories of change, best practices and available research evidence as a model for stigma reduction. The Stigma of Mental Illness is an important vehicle to communicate conceptual issues in the field of stigma reduction, to document the work done to date within the MHCC Opening Minds program, and to offer practical strategies to broaden the scope and utility of the work for different contexts, cultures, and countries. This volume will be a global interest, given the growing importance of stigma reduction related to mental disorders and related problems.

The Soviet Strategic Offensive in Manchuria, 1945 Apr 02 2020 This critical examination of the final Soviet strategic offensive operation during World War II seeks to chip away at two generally inaccurate pictures many Westerners have of the war. Specifically, Westerners seem to think that only geography, climate, and sheer numbers negated German military skill and competency on the

eastern front, a view that relegates Soviet military accomplishments to oblivion.

The Routledge International Handbook of Forensic Psychology in Secure Settings Oct 01 2022 The Routledge International Handbook of Forensic Psychology in Secure Settings is the first volume to identify, discuss and analyse the most important psychological issues within prisons and secure hospitals. Including contributions from leading researchers and practitioners from the UK, US, Australia and Canada, the book covers not only the key groups that forensic psychologists work with, but also the treatment options available to them, workplace issues unique to secure settings, and some of the wider topics that impact upon offender populations. The book is divided into four sections: population and issues; treatment; staff and workplace issues; contemporary issues for forensic application. With chapters offering both theoretical rigour and practical application, this is a unique resource that will be essential reading for any student, researcher or practitioner of forensic psychology or criminology. It will also be relevant for those interested in social policy and social care.

Crossing the Global Quality Chasm Sep 27 2019 In 2015, building on the advances of the Millennium Development Goals, the United Nations adopted Sustainable Development Goals that include an explicit commitment to achieve universal health coverage by 2030. However, enormous gaps remain between what is achievable in human health and where global health stands today, and progress has been both incomplete and unevenly distributed. In order to meet this goal, a deliberate and comprehensive effort is needed to improve the quality of health care services globally. Crossing the Global Quality Chasm: Improving Health Care Worldwide focuses on one particular shortfall in health care affecting global populations: defects in the quality of care. This study reviews the available evidence on the quality of care worldwide and makes recommendations to improve health care quality globally while expanding access to preventive and therapeutic services, with a focus in low-resource areas. Crossing the Global Quality Chasm emphasizes the organization and delivery of safe and effective care at the patient/provider interface. This study explores issues of access to services and commodities, effectiveness, safety, efficiency, and equity. Focusing on front line service delivery that can directly impact health outcomes for individuals and populations, this book will be an essential guide for key stakeholders, governments, donors, health systems, and others involved in health care.

Ending Discrimination Against People with Mental and Substance Use Disorders May 28 2022

Estimates indicate that as many as 1 in 4 Americans will experience a mental health problem or will misuse alcohol or drugs in their lifetimes. These disorders are among the most highly stigmatized health conditions in the United States, and they remain barriers to full participation in society in areas as basic as education, housing, and employment. Improving the lives of people with mental health and substance abuse disorders has been a priority in the United States for more than 50 years. The Community Mental Health Act of 1963 is considered a major turning point in America's efforts to improve behavioral healthcare. It ushered in an era of optimism and hope and laid the groundwork for the consumer movement and new models of recovery. The consumer movement gave voice to people with mental and substance use disorders and brought their perspectives and experience into national discussions about mental health. However over the same 50-year period, positive change in American public attitudes and beliefs about mental and substance use disorders has lagged behind these advances. Stigma is a complex social phenomenon based on a relationship between an attribute and a stereotype that assigns undesirable labels, qualities, and behaviors to a person with that attribute. Labeled individuals are then socially devalued, which leads to inequality and discrimination. This report contributes to national efforts to understand and change attitudes, beliefs and behaviors that can lead to stigma and discrimination. Changing stigma in a lasting way will require coordinated efforts, which are based on the best possible evidence, supported at the national level with multiyear funding, and planned and implemented by an effective coalition of representative stakeholders. Ending Discrimination Against People with Mental and Substance Use Disorders: The Evidence for Stigma Change explores stigma and discrimination faced by individuals with mental or substance use disorders and recommends effective strategies for reducing stigma and encouraging people to seek treatment and other supportive services. It offers a set of conclusions and recommendations about successful stigma change strategies and the research needed to inform and evaluate these efforts in the United States.

Code of Practice Dec 31 2019 This Code of Practice is a reference tool for those dealing with, and caring for people admitted to hospital and care homes with mental health problems. Authored by the Department of Health and produced following wide consultation with those who provide and receive services under the Mental Health Act, this publication will come into force on 3 November 2008. Through the Mental Health Act 2007, the Government has updated the 1983 Act to ensure it keeps pace with the changes in the way that mental health services are - and need to be - delivered. This publication provides guidance and advice to registered medical practitioners, approved clinicians, managers and staff of hospitals, and approved mental health professionals on how they should proceed when undertaking duties under the Act. It also gives guidance to doctors and other professionals about certain aspects of medical treatment for mental disorder more generally. The Mental Health Act Code of Practice is also aimed at all of those working in primary care, Mental Health Trusts, NHS Foundation Trusts as well as solicitors and attorneys who advise on mental health law. The Code should also be beneficial to the police and ambulance services and others in health and social services (including the independent and voluntary sectors) involved in providing services to people who are, or may become, subject to compulsory measures under the Act. It will also be a guide for those working with people with specific mental health needs such as those in nursing and care homes, and those in prison.

How to Prepare a Research Proposal Aug 07 2020 The public assumes the researcher spends the day dreaming up and trying out creative ideas. In reality, proposal development is an invisible but critical barrier over which even a good researcher may tumble. This book is intended to lower that barrier. It should increase first-trial recognition of good ideas and ensure that rejections do not result because a proposal poorly represented either the ideas, the investigator, or both.

Finding Out Fast May 04 2020 Finding Out Fast provides readers with key skills and approaches for research designed to inform policies, particularly on development. Recognizing that policy decisions are typically made under pressure of time and on the basis of incomplete data or with limited resources with which to obtain information, the authors provide guidance on how to locate, evaluate and use relevant information, fast. They explain and critically review a variety of research methods for 'finding out fast', in the belief that these methods can still be rigorous. Finding Out Fast will assist readers to become competent investigators, to understand how to use research more effectively and how to commission and critical

Comprehensive Men's Mental Health May 16 2021 A complete and accessible textbook covering current understandings about how mental health issues affect men, and the available treatments.

Mental Health, Intellectual and Developmental Disabilities and the Ageing Process Aug 26 2019 This book brings together findings from research and clinical practice, with comprehensive coverage of the important aspects of mental health in ageing persons with intellectual and developmental disabilities. It is crucial for professionals involved in the care of persons with all intellectual and developmental disabilities to have a broad understanding of the essential range of issues, and therefore this book provides a truly multi-disciplinary perspective, complete with many figures and illustrations to underline the key points. Undoubtedly, research and clinical practice are much more advanced in the general ageing population than in persons with intellectual and developmental disabilities, and so professionals and academics must be made fully aware of commonalities and idiosyncrasies of older people with intellectual and developmental disabilities. This book presents the ongoing developments concerning mental health and aging, which will become relevant to the intellectually disabled population. Through experience, this book also acknowledges that the impact on the persons themselves and on their carers always needs to be taken into account, with treatment programs established with a multi-faceted team approach in mind. Avoiding the jargon of many titles in this area while maintaining the hands-on approach of clinical practice, this book meshes the practical and scientific worlds, with all chapters written by leading experts in the field. Beyond the US, the IASSIDD support expands the book message worldwide.

Mental Health Economics Apr 26 2022 The main objective of this work is to provide a book with high quality content that becomes a reference and support for graduate course (Mental Health, Public Health and Epidemiology) and for research in the domain of health economics applied to mental health. Also this book might be useful for policymakers on formulating mental health policies. Key messages of this book are based on: a) mental illness represent a huge cost for society and for health care; b) health economics applied to mental health could help in the optimization of resource allocation for mental health care and for better decision making in terms of balancing costs and benefits; c) interventions and treatment should be also chosen in general medical practice and in public decision-policy according to cost-effectiveness, burden of disease and equity principles; d) quality of care is related with better outcomes, higher quality of life for clients, and with lower costs for society and health system (best value for money); e) it is possible to decrease

the burden of mental disorders with cost-effective treatments. The book is divided in four main topics: 1. Introduction to Health Economics applied to Mental Health – this section is an overview of basic principles, concepts and methods used in Economics and Health Economics to enable students to make critical appraisal of Health Economics texts and also to design research studies in this topic. 2. Health Economics applied to the evaluation of quality and costs of Mental Health Services – this section presents results of Brazilian studies on the costs of mental health care (hospital, outpatient care, residential care, informal care), methods on the measurement of costs and it discusses issues related with public policies decisions and quality of mental health care in the low and middle income countries context. There is also an overview of quality indicators of mental health care and instruments to evaluate mental health services and costs. 3. Health Economics applied to evaluate treatment of mental disorders - This section presents a review of cost-effectiveness of pharmacological treatments and other interventions applied for treating the most burdensome mental disorders such as depressive and anxiety disorders, bipolar disorders, psychosis, alcohol and drug disorders, dementia, and hyper attention deficit disorders. 4. Health Economics, burden and indirect costs of mental disorders - This section highlights the social and economic burden caused by mental illness under societal perspective focusing on stigma, unemployment, indirect costs in the workplace (absenteeism and presenteeism), the relationship between poverty and mental disorders, global health and social determinants of mental health and on the costs of mental disorders (depression, anxiety, psychosis, alcohol and drug disorders). We present some instruments to measure indirect costs of mental disorders.

Financing for Sustainable Development Report 2021 Nov 29 2019 This report assesses progress in implementing the commitments and actions in the Addis Ababa Action Agenda. The global economic recession and financial turmoil from COVID-19 (coronavirus) are derailing implementation of the Agenda and achievement of the Sustainable Development Goals (SDGs). Even before the pandemic, the 2020 Financing for Sustainable Development Report (FSDR) of the Inter-agency Task Force noted that there was backsliding in many areas. Due to the crisis, global financial markets have witnessed heavy losses and intense volatility. Particularly worrisome is the prospect of a new debt crisis. The FSDR highlights both immediate and longer-term actions, including arresting the backslide, to respond to the COVID-19 crisis. Recommendations are included in the report.

Systems Thinking for Health Systems Strengthening Dec 23 2021 Many developing countries are looking to scale-up what works through major systems strengthening investments. With leadership, conviction and commitment, systems thinking can facilitate and accelerate the strengthening of systems to more effectively deliver interventions to those in need and be better able to improve health in an equitable way. Systems thinking is not a panacea. Its application does not mean that resolving problems and weaknesses will come easily or naturally or without overcoming the inertia of the established way of doing things. But it will identify, with more precision, where some of the true blockages and challenges lie. It will help to: 1) explore these problems from a systems perspective; 2) show potentials of solutions that work across sub-systems; 3) promote dynamic networks of diverse stakeholders; 4) inspire learning; and 5) foster more system-wide planning, evaluation and research. And it will increase the likelihood that health system strengthening investments and interventions will be effective. The more often and more comprehensively the actors and components of the system can talk to each other from within a common framework --communicating, sharing, problem-solving -- the better chance any initiative to strengthen health systems has. Real progress will undoubtedly require time, significant change, and momentum to build capacity across the system. However, the change is necessary -- and needed now. This report therefore speaks to health system stewards, researchers and funders and maps out a set of strategies and activities to harness these approaches, to link them to these emerging opportunities and to assist systems thinking to become the norm in design and evaluation of interventions in health systems. But, the final message is to the funders of health system strengthening and health systems research who will need to recognize the potential in these opportunities, be prepared to take risks in investing in such innovations, and play an active role in both driving and following this agenda towards more systemic and evidence-informed health development.

Blackness in Britain Nov 21 2021 Black Studies is a hugely important, and yet undervalued, academic field of enquiry that is marked by its disciplinary absence and omission from academic

curricula in Britain. There is a long and rich history of research on Blackness and Black populations in Britain. However Blackness in Britain has too often been framed through the lens of racialised deficits, constructed as both marginal and pathological. Blackness in Britain attends to and grapples with the absence of Black Studies in Britain and the parallel crisis of Black marginality in British society. It begins to map the field of Black Studies scholarship from a British context, by collating new and established voices from scholars writing about Blackness in Britain. Split into five parts, it examines: Black studies and the challenge of the Black British intellectual; Revolution, resistance and state violence; Blackness and belonging; exclusion and inequality in education; experiences of Black women and the gendering of Blackness in Britain. This interdisciplinary collection represents a landmark in building Black Studies in British academia, presenting key debates about Black experiences in relation to Britain, Black Europe and the wider Black diaspora. With contributions from across various disciplines including sociology, human geography, medical sociology, cultural studies, education studies, post-colonial English literature, history, and criminology, the book will be essential reading for scholars and students of the multi- and inter-disciplinary area of Black Studies.

Missing Persons Jun 28 2022 A missing person is an individual whose whereabouts are unknown and where there is some concern for his or her wellbeing. In the UK, around 250,000 people are reported missing every year, with the majority being children under the age of 18. Despite the fact that missing persons are a social phenomenon which encompasses vast areas of interest, relatively little is known about those who go missing, what happens to them while they are missing, and what can be done to prevent these incidents from occurring. This groundbreaking book brings together for the first time ideas and expertise across this vast subject area into one interconnected publication. It explores the subjects of missing children, missing adults, the investigative process of missing person cases, and the families of missing persons. Those with no prior knowledge or professionals with focused knowledge in some areas will be able to expand their understanding of a variety of topics relevant to this field through detailed chapters which advance our understanding of this complex phenomenon, discuss what is unknown, and suggest the best and most important steps forward to further advance our knowledge.

Peer Support in Mental Health Sep 19 2021 In recent years, the concepts of peer support, self-help and self-management have moved from the periphery of mental health care toward the centre, and have fast become mainstream approaches to supporting well-being. Peer Support in Mental Health provides an overview of the core concepts and an appreciation of the complexities, controversies and applications of each concept. This innovative textbook will support not only mental health professionals and trainees, but also peers, people who use services and their carers. The authors... - Track the development of peer support approaches and provide an overview of their current uses and applications. - Use case examples to support the application of theory to practice. - Draw on lived experience to demonstrate the different approaches to peer support.

Women's Voices in Psychiatry Aug 31 2022 In early 2015, the Royal College of Psychiatrists had 4,640 female Members and Fellows and 6,015 male Members and Fellows, a ratio of 43.5% to 56.5%. Despite the high and increasing proportion of women in UK psychiatry over the years (relative to other medical specialties), publications about the history and practice of psychiatry have traditionally been written by men and about men, and there has been a distinct lack of commentary from the woman's perspective. Women's Voices in Psychiatry: A Collection of Essays examines the role of women in psychiatry and shares some of their key contributions to the specialty. Presented as a collection of thoughts, opinions, and experiences of women doctors specializing in modern day psychiatry, this book is intended to be accessible to all readers interested in the mind, mental health services, and women's roles in medicine. Interspersed between these essays are short biographical profiles of pioneering women who have contributed to psychiatry and mental health services. Women's Voices in Psychiatry: A Collection of Essays covers a diverse range of topics and aims to draw lessons from history, particularly about women's roles in UK psychiatry, and to make things better for psychiatrists of the future.

Abolishing the Concept of Mental Illness Dec 11 2020 In Abolishing the Concept of Mental Illness: Rethinking the Nature of Our Woes, Richard Hallam takes aim at the very concept of mental illness, and explores new ways of thinking about and responding to psychological distress. Though the

concept of mental illness has infiltrated everyday language, academic research, and public policy-making, there is very little evidence that woes are caused by somatic dysfunction. This timely book rebuts arguments put forward to defend the illness myth and traces historical sources of the mind/body debate. The author presents a balanced overview of the past utility and current disadvantages of employing a medical illness metaphor against the backdrop of current UK clinical practice. Insightful and easy to read, *Abolishing the Concept of Mental Illness* will appeal to all professionals and academics working in clinical psychology, as well as psychotherapists and other mental health practitioners.

GeNeDis 2020 Feb 10 2021 The 4th World Congress on Genetics, Geriatrics and Neurodegenerative Diseases Research (GeNeDis 2020) focuses on the latest major challenges in scientific research, new drug targets, the development of novel biomarkers, new imaging techniques, novel protocols for early diagnosis of neurodegenerative diseases, and several other scientific advances, with the aim of better, safer, and healthier aging. The increase in the average length of life leads to the development of various diseases in the elderly population. This volume focuses on the sessions from the conference on Geriatrics.
