Building Resilient IP Networks Aug 29 2019 The practical guide to building resilient and highly available IP networks Learn from an all-in-one introduction to new features and developments in building a resilient IP network Enable your organization to meet internal service-level agreements (SLAs) for mission-critical resources Understand how a resilient IP network can help in delivering mission-critical information such as video and voice services Work with configuration examples that are based on real-world issues and customer requirements Get tips and best practices from field personnel who have worked on some of the largest networks with stringent uptime requirements and SLAs More companies are building networks with the intention of using them to conduct business. Because the network has become such a strategic business tool, its availability is of utmost importance to companies and their service providers. The challenges for the professionals responsible for these networks include ensuring that the network remains up all the

time, keeping abreast of the latest technologies that help maintain uptime, and reacting to ever-increasing denial-of-service (DoS) attacks. **Building Resilient IP Networks** helps you meet those challenges. This practical guide to building highly available IP networks captures the essence of technologies that contribute to the uptime of networks. You gain a clear understanding of how to achieve network availability through the use of tools, design strategy, and Cisco IOS® Software. With **Building Resilient IP Networks**, you examine misconceptions about five-nines availability and learn to focus your attention on the real issues: appreciating the limitations of the protocols, understanding what has been done to improve them, and keeping abreast of those changes. **Building Resilient IP Networks** highlights the importance of having a modular approach to building an IP network and, most important, illustrates how a modular design contributes to a resilient network. You learn how an IP network can be broken down to various modules and how these modules interconnect with one another. Then you explore new network resiliency features that have been developed recently, categorized with respect to the design modules. **Building Resilient IP Networks** is relevant to both enterprise and service provider customers of all sizes. Regardless of whether the network connects to the Internet, fortifying IP networks for maximum uptime and prevention of attacks is mandatory for anyone's business. This book is part of the **Networking Technology Series** from Cisco Press®, which offers networking professionals valuable information for constructing efficient networks, understanding new technologies, and building successful careers.

Ending Discrimination Against People with Mental and Substance Use Disorders Sep 03 2022 Estimates indicate that as many as 1 in 4 Americans will experience a mental health problem or will misuse alcohol or drugs in their lifetimes. These disorders are among the most highly stigmatized health conditions in the United States, and they remain barriers to full participation in society in areas as basic as education, housing, and employment. Improving the lives of people with mental health and substance abuse disorders has been a priority in the United States for more than 50 years. The Community Mental Health Act of 1963 is considered a major turning point in America's efforts to improve behavioral healthcare. It ushered in an era of optimism and hope and laid the groundwork for the consumer movement and new models of recovery. The consumer movement gave voice to people with mental and substance use disorders and brought their perspectives and experience into national discussions about mental health. However over the same 50-year period, positive change in American public attitudes and beliefs about mental and substance use disorders has lagged behind these advances. Stigma is a complex social phenomenon based on a relationship between an attribute and a stereotype that assigns undesirable labels, qualities, and behaviors to a person with that attribute. Labeled individuals are then socially devalued, which leads to inequality and discrimination. This report contributes to national efforts to understand and change attitudes, beliefs and behaviors that can lead to stigma and discrimination. Changing stigma in a lasting way will require coordinated efforts, which are based on the best possible evidence, supported at the national level with multiyear funding, and planned and implemented by an effective coalition of representative stakeholders. **Ending Discrimination Against People with Mental and Substance Use Disorders: The Evidence for Stigma Change** explores stigma and discrimination faced by individuals with mental or substance use disorders and recommends effective strategies for reducing stigma and encouraging people to seek treatment and other supportive services. It offers a set of conclusions and recommendations about successful stigma change strategies and the research needed to inform and evaluate these efforts in the United States.

EBOOK: European Child Health Services and Systems: Lessons without Borders Jul 09 2020 The book will focus on three key aspects of delivery of child health services: service integration and coordination, public health measures, and enhancing the quality of care for children. Taking a child-centric view on understanding how health services and systems work the book aims to contribute towards improving children's health through deepening the understanding of children's health services. Focusing primarily on the western European countries the book draws on research conducted with child health leaders in ten countries: Austria, Britain, Finland, France, Israel, Italy, Netherlands, Norway, Poland, and Sweden. The chapters include clinical scenarios designed to help identify and describe the various ways in which children and their families negotiate health services when dealing with twelve different conditions. Using clinical scenarios in this way allows the book authors to capture the diverse aspects of each health system as well as assessment and analysis of the challenges involved in each, and their successes and failures.

The Essen Climate Evaluation Schema EssenCES Jan 15 2021 The social atmosphere in forensic hospitals and prisons is crucial to their success - this "manual and more" shows how to assess the climate and identify ways of improving it. The social climate in settings such as forensic psychiatric hospitals and prisons is crucial to their success. The Essen Climate Evaluation Schema (EssenCES) described here is a short, well-validated questionnaire that measures three essential facets of an institution's social atmosphere. An overview of the EssenCES is followed by detailed advice on how to administer and score it and how to interpret findings, as well as reference norms from various countries and types of institution. The EssenCES "manual and more" is thus a highly useful tool for researchers, clinicians, and service managers working in forensic settings.

Blackness in Britain Oct 31 2019 Black Studies is a hugely important, and yet undervalued, academic field of enquiry that is marked by its disciplinary absence and omission from academic curricula in Britain. There is a long and rich history of research on Blackness and Black populations in Britain. However Blackness in Britain has too often been framed through the lens of

racialised deficits, constructed as both marginal and pathological. Blackness in Britain attends to and grapples with the absence of Black Studies in Britain and the parallel crisis of Black marginality in British society. It begins to map the field of Black Studies scholarship from a British context, by collating new and established voices from scholars writing about Blackness in Britain. Split into five parts, it examines: Black studies and the challenge of the Black British intellectual; Revolution, resistance and state violence; Blackness and belonging; exclusion and inequality in education; experiences of Black women and the gendering of Blackness in Britain. This interdisciplinary collection represents a landmark in building Black Studies in British academia, presenting key debates about Black experiences in relation to Britain, Black Europe and the wider Black diaspora. With contributions from across various disciplines including sociology, human geography, medical sociology, cultural studies, education studies, post-colonial English literature, history, and criminology, the book will be essential reading for scholars and students of the multi- and inter-disciplinary area of Black Studies.

The Image of Madness Jul 01 2022 Negative moral judgements seem to have been a constant fixture in the way societies and cultures have regarded groups displaying deviant behavior. This is particularly true of the mentally ill. Stereotypes are most ingrained for mental pathologies with

heightened visibility in society, such as schizophrenia. Preconceived notions about danger, occult powers and mysterious malevolence which hover over the illness, contribute to the total debasement of the patient. Persons suffering from other forms of mental illness are stigmatized to a lesser degree. But the threat is real that labeling will extend to every endeavor linked to mental illness: care facilities, professionals, therapies in general and psychotropic medication in particular. Lay belief in the existence of important side-effects to this medication and public fears about the risk of addiction form the basis of very restricted, or even hostile, attitudes towards it and result in weak compliance. Inversely, psychotherapy now seems widely accepted and different forms of intervention have contributed to de-stigmatizing psychiatric illness and to stop the exclusion of patients. This book is of interest not only to psychiatrists, but also to mental health workers, psychologists, social scientists and social workers who wish to alter common precepts and prejudices regarding psychiatric disorders.

The Stigma of Mental Illness Dec 02 2019 Stigma is one of the major barriers to care for people with mental health and related disorders. Stigma includes negative beliefs about and hostile perceptions towards others, shame and self-stigma, discriminatory practices in hiring, promotion and recognition of people who suffer from mental health challenges, and structural and organizational policies and processes that result in inequalities for people who have mental health challenges. Stigma has been recognized as a significant factor in the well-being of people with mental health and related problems and can be more debilitating than the direct effects of mental health problems themselves. The Mental Health Commission of Canada (MHCC) was established to conduct policy reviews and to promote initiatives related to mental health. The Opening Minds program of the MHCC is the largest systematic effort in Canadian history to reduce stigma related to mental illnesses. The program has adopted the systematic development, evaluation and deployment of targeted programs based on theories of change, best practices and available research evidence as a model for stigma reduction. The Stigma of Mental Illness is an important vehicle to communicate conceptual issues in the field of stigma reduction, to document the work done to date within the MHCC Opening Minds program, and to offer practical strategies to broaden the scope and utility of the work for different contexts, cultures, and countries. This volume will be a global interest, given the growing importance of stigma reduction related to mental disorders and related problems.

Systems Thinking for Health Systems Strengthening Aug 22 2021 Many developing countries are looking to scale-up what works through major systems strengthening investments. With leadership, conviction and commitment, systems thinking can facilitate and accelerate the strengthening of systems to more effectively deliver interventions to those in need and be better able to improve health in an equitable way. Systems thinking is not a panacea. Its application does not mean that resolving problems and weaknesses will come easily or naturally or without overcoming the inertia of the established way of doing things. But it will identify, with more precision, where some of the true blockages and challenges lie. It will help to: 1) explore these problems from a systems perspective; 2) show potentials of solutions that work across sub-systems; 3) promote dynamic networks of diverse stakeholders; 4) inspire learning; and 5) foster more system-wide planning, evaluation and research. And it will increase the likelihood that health system strengthening investments and interventions will be effective. The more often and more comprehensively the actors and components of the system can talk to each other from within a common framework --communicating, sharing, problem-solving -- the better chance any initiative to strengthen health systems has. Real progress will undoubtedly require time, significant change, and momentum to build capacity across the system. However, the change is necessary -- and needed now. This report therefore speaks to health system stewards, researchers and funders and maps out a set of strategies and activities to harness these approaches, to link them to these emerging opportunities and to assist systems thinking to become the norm in design and evaluation of interventions in health systems. But, the final message is to the funders of health system strengthening and health systems research who will need to recognize the potential in these opportunities, be prepared to take risks in investing in such innovations, and play an active role in both driving and following this agenda towards more systemic and evidence-informed health development.
