NICOMACHEAN ETHICS Dec 08 2020 ♦EVERY art and every inquiry, and similarly every action and pursuit, is thought to aim at some good; and for this reason the good has rightly been declared to be that at which all things aim. But a certain difference is found among ends; some are activities, others are products apart from the activities that produce them. Where there are ends apart from the actions, it is the nature of the products to be better than the activities. Now, as there are many actions, arts, and sciences, their ends also are many; the end of the medical art is health, that of shipbuilding a vessel, that of strategy victory, that of economics wealth. But where such arts fall under a single capacity- as bridle-making and the other arts concerned with the equipment of horses fall under the art of riding, and this and every military action under strategy, in the same way other arts fall under yet others- in all of these the ends of the master arts are to be preferred to all the subordinate ends; for it is for the sake of the former that the latter are pursued. It makes no difference whether the activities themselves are the ends of the actions, or something else apart from the activities, as in the case of the sciences just mentioned.♦

Gymnastics of the Mind Feb 28 2020 This book is at once a thorough study of the educational system for the Greeks of Hellenistic and Roman Egypt, and a window to the vast panorama of educational practices in the Greco-Roman world. It describes how people learned, taught, and practiced literate skills, how schools functioned, and what the curriculum comprised. Raffaella Cribiore draws on over 400 papyri, ostraca (sherds of pottery or slices of limestone), and tablets that feature everything from exercises involving letters of the alphabet through rhetorical compositions that represented the work of advanced students. The exceptional wealth of surviving source material renders Egypt an ideal space of reference. The book makes excursions beyond Egypt as well, particularly in the Greek East, by examining the letters of the Antiochene Libanius that are concerned with education. The first part explores the conditions for teaching and learning, and the roles of teachers, parents, and students in education; the second vividly describes the progression from elementary to advanced education. Cribiore examines not only school exercises but also books and commentaries employed in education--an uncharted area of research. This allows the most comprehensive evaluation thus far of the three main stages of a liberal education, from the elementary teacher to the grammarian to the rhetorician. Also addressed, in unprecedented detail, are female education and the role of families in education. *Gymnastics of the Mind* will be an indispensable resource to students and scholars of the ancient world and of the history of education.

Long-Term Athlete Development Dec 20 2021 Long-Term Athlete Development describes how to systematically develop sporting excellence and increase active participation in local, regional, and national sport organizations. This resource describes the long-term athlete development (LTAD) model, an approach to athlete-centered sport that combines skill instruction with long-term planning and an understanding of human development. By learning about LTAD, sport administrators and coaches will gain the knowledge and tools to enhance participation and improve performance and growth of athletes. This text offers the first in-depth and practical explanation of the LTAD model. Long-Term Athlete Development integrates current research on talent development and assessment into practice to help sport leaders plan athletic development across the life span or design detailed programs for a particular group, including those with physical and cognitive disabilities. Authors Balyi, Way, and Higgs—pioneers and veteran LTAD facilitators—critique current talent development models, discuss the limitations of the LTAD model, and demonstrate the benefits of LTAD as a new approach. By integrating knowledge of these models, readers are able to analyze their own programs and take steps to improve sport and coaching philosophies and reach adherence and performance goals. Explanations and visuals of concepts help readers understand the state of knowledge in talent identification and long-term athlete development. Chapter-opening vignettes offer examples of how the LTAD model can be used to alleviate common issues. Listings at the end of each chapter offer sources for further study, and reflection questions guide readers in applying the content. The text offers a logical presentation of current research:

- Key factors that guide and shape the LTAD model, such as physical literacy, the differences between early- and late-specialization sports, and variations in trainability across the life span
- Information on the time needed to develop excellence in sport and how periodization of training is related to the developmental stage of the athlete
- The seven stages of LTAD, from development of fundamental movement skills to training for elite competition and the transition to lifelong physical activity
- Considerations in the development of optimal programs for participants passing through each of the seven stages

Long-Term Athlete Development is an essential guide to improving the quality of sport, developing high-performance athletes, and creating healthy, active citizens. It offers parents, coaches, and sport administrators a deeper understanding of the LTAD model, helping them create an enjoyable, developmentally appropriate environment for both competitive athletes and enthusiastic participants.
